

Wireless and More

U-WAVE®

Wireless Measurement Data Communication System

Mitutoyo's new U-WAVE® system provides simple-to-use, wireless data communication from measuring tools and instruments to a PC and much more. New features include a multi-color LED for data send confirmation, a data cancellation function, and transmitted tool identification; all to ensure operator convenience and dependable data collection and organization. In addition, one lithium battery will support 400,000 data transmissions ensuring several months of uninterrupted data collection.

Complete Data Management

With a range of up to 60 feet and support of up to 1600 measuring tools in a multi-receiver system, the U-Wave® offers an incredibly flexible inspection network. The U-Wave® can load data into any PC software that accepts keyboard input, but combined with Mitutoyo's MeasurLink® SPC software, a complete measurement data management system can be created to satisfy any quality assurance application.
