

NEW PRODUCT ANNOUNCEMENT

March 25, 2021

Dear Mitutoyo Distributors,

We are pleased to announce the release of the **RENEWED SJ-410 series** to our line of Form Measurement Instruments. This new version incorporates the new striking rich colors common to the redesign of our brand and products to reflect usability, innovation and appeal.

Appealing functions and features such as portability, easy to use operations combined with rich color-graphic LCD touch screen continues to be its core design base.

A built-in thermal printer, free downloadable software, various out-put capabilities and additional tools using optional software Formtracepak-AP makes this portable unit capable of analysis comparable to a high-level PC based system.

Optional accessories of SJ-410 include:

- **Auto-set unit (178-010), X-axis unit (178-020), Tilting unit (178-030)**
 - Enables measurements to be made with a single button push increasing throughput.
 - Safely controls contact of the detector eliminating the possibility of operator error causing stylus damage.
 - Automatically completes a full cycle of stylus contact, measurement, stylus retraction and detector auto-return from just one button push.

If you would like further information or assistance regarding the **RENEWED SJ-410 Series**, please contact your Mitutoyo sales representative or the Mitutoyo sales office in your area.
